Final Consultation Summary
Date/Time: Tuesday, May 5, 2026 at 3:30 PM
Meeting Format: In-Person
Length: Approximately 30 minutes

Summary of How the Consultation Went

The meeting focused on two things: reviewing the common feedback received during the Web Expo and walking through the current version of the Rocket Rentals site to confirm that it met the client's goals. During the walkthrough, the client reviewed the homepage, tool browsing experience, tool detail pages, login/register flow, cart and checkout process, account area, "My Rentals" page, and the staff/admin dashboard features.
The client felt that the site now gives users the information they need in a much clearer way. In particular, the client liked that visitors can search or browse tools by category, view pricing and availability, and move through a structured rental process. The client also thought the site looked more polished and more organized than the earlier version, while still keeping the original Rocket Rentals branding style.

Major Themes in Peer Feedback

The peer feedback from the Web Expo showed a few clear patterns:

- Users liked the overall idea and said the site's purpose was easy to understand.
- The search and category browsing made it easier to find tools quickly.
- The checkout flow felt more complete once users could move through cart, schedule, delivery details, and review steps.
- Several people wanted clearer guidance on how the rental process works before checkout.
- Some users wanted more context about the business, such as an about section or contact information.
- A few users were unsure about the difference between customer-facing pages and staff/admin pages.
- Some peers mentioned that advanced features like real payment processing or live delivery tracking would be nice, but they understood those were beyond the scope of a class project.

Discussion Using the Required Questions

Are users getting the information they need from the site?
The client said yes, especially because the site now shows tool names, categories, pricing, deposits, availability, rental scheduling, and reservation details in a more organized way. The client felt the "How It Works" page helped explain the process better.
Is the site visually appealing and easy to use?
The client said yes. They liked that the site kept the Rocket Rentals look while improving the

organization, page flow, and readability. The client especially liked the cleaner navigation and the more structured layout for the catalog and checkout.
Are there patterns or common themes in the feedback?
Yes. The strongest pattern was that users wanted clarity: clearer steps, clearer labels, and clearer explanations of what happens during the rental process.
What are the most important issues identified?
The client identified these as the most important:

- Making the rental flow easy to understand
- Making navigation between pages more intuitive
- Giving users more confidence through better business/context information
- Making sure reservations can be viewed and managed after checkout

How should these issues be prioritized?

- High: clarity of checkout flow, account flow, and reservation process
- Medium: more context/about information and better wording in a few places
- Low: extra “nice-to-have” features such as live tracking, customer reviews, or full payment integration

Feedback the Client Agreed to Address

The client agreed with the following feedback and felt the current version either already addressed it or addressed it well enough for final submission:

- Clearer rental steps: addressed through the multi-step checkout flow and the dedicated “How It Works” page.
- Better browsing experience: addressed through category filtering, search, and tool detail pages.
- Improved user account visibility: addressed through the account page and “My Rentals” page so customers can review their reservations.
- More structure for internal business use: addressed through the staff dashboard, reservations page, fulfillment jobs page, and business metrics page.
- More confidence for users during checkout: addressed through clearer review information, address verification, rental timing details, and order summary estimates.

Feedback the Client Chose Not to Incorporate

The client chose not to add the following suggestions at this time:

- Live online payment processing: not incorporated because the current project uses a demo payment flow and a real payment system would be outside the project scope.
- Live delivery tracking or text alerts: not incorporated because it would require additional backend services and more time than the course project allows.
- Customer reviews/ratings: not incorporated because the business does not yet have real user review data, and fake reviews would reduce credibility.

Additional Feedback Raised by the Client

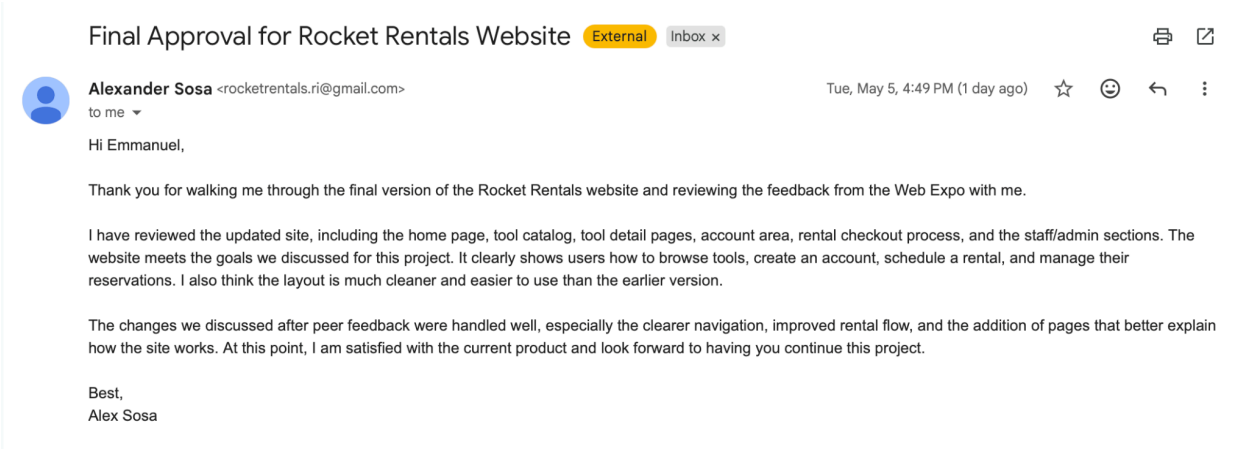
The client raised a few final concerns and suggestions during the meeting:

- They wanted to make sure the site clearly distinguishes between the customer side and the staff/admin side.
- They wanted a little more confidence that first-time users would understand delivery vs. pickup options.
- They wanted the About/Contact information to remain simple, since this is still a class demo and not a live business deployment.
- They emphasized that the current version should feel complete and professional, even if some advanced business features are intentionally simplified.

Final Changes or Refinements to Be Made

A realistic final revision list based on the consultation would be:

- Double-check wording in checkout so delivery and pickup choices are immediately clear.
- Make sure the “How It Works” page is easy to find from the homepage and navigation.
- Confirm the About page clearly explains that the project is a demo while still presenting the business professionally.
- Do a final pass on navigation labels and page consistency.
- Re-test the main customer flow: browse tools, open tool details, add to cart, complete reservation, and view “My Rentals.”
- Re-test the staff flow: view reservations, open contract details, view ops jobs, and access business metrics with the correct role permissions.



Final Approval for Rocket Rentals Website External Inbox ×

Alexander Sosa <rocketrentals.ri@gmail.com> Tue, May 5, 4:49 PM (1 day ago)
to me

Hi Emmanuel,

Thank you for walking me through the final version of the Rocket Rentals website and reviewing the feedback from the Web Expo with me.

I have reviewed the updated site, including the home page, tool catalog, tool detail pages, account area, rental checkout process, and the staff/admin sections. The website meets the goals we discussed for this project. It clearly shows users how to browse tools, create an account, schedule a rental, and manage their reservations. I also think the layout is much cleaner and easier to use than the earlier version.

The changes we discussed after peer feedback were handled well, especially the clearer navigation, improved rental flow, and the addition of pages that better explain how the site works. At this point, I am satisfied with the current product and look forward to having you continue this project.

Best,
Alex Sosa
